# Equal distribution of resources and protection for everyone

According to studies, individuals and countries that contribute the least to climate change tend to be those who are most at risk from its effects. To me, accomplishing climate justice entails providing everyone, regardless of their economic standing or geographic location, with fair and equitable access to resources and protection.

---

## More sustainable transportation options

I do not promote the riding of wild animals as this is just visual artwork. Climate justice to me is making sustainable and eco-friendly transportation options more accessible to people in the country. Riding bikes, and scooters, use of electric/hybrid cars, making more walkable routes etc. help in the reduction of CO2 emissions, thus improving air quality.

---

# Protecting and restoring ecosystems and wildlife

Science shows wildlife species are the missing link between biodiversity and climate, they remove tons of CO<sub>2</sub> each year. Additionally, when ecosystems are healthy, they build resilience to climate change. This achieves climate justice by having people uniting to safeguard and rehabilitate our ecosystems and the species that depend on them.
